If you didn't already know, it's been a couple of months since we announced that the hdd regenerator was coming to sierra. Last week, I was finally able to demo this great tool at E3. The hdd regenerator is a portable application that can help a user recover data from a damaged or corrupted hard drive. It can repair bad sectors, read the raw data from the hard drive, and repair data areas that have been corrupted due to bad sectors, issues with a hard drive's controller, etc. We are extremely proud of the work that our developers have done on this product, and are excited to bring it to sierra in a few short months. hdd regenerator 1.71 will be available in the fall. We can't wait to share more information and to start getting feedback. Until then, be sure to check out our last preview of hdd regenerator 1.71 for a look at what's new in this version.GL_ARB_internalformat_query GL_ARB_internalformat_query GL_INTEL_INTERNALFORMAT_MIRAK_INTEL 0x70D0 GL_INTEL_INTERNALFORMAT_MIRAK_NUM_FRAGMENT_REGISTERS 0x70D1 GL_INTEL_INTERNALFORMAT_MIRAK_NUM_RENDER_TARGETS 0x70D2
